

VICTOR CHIDERA

Full-Stack Product Engineer | React • TypeScript • Node.js • Serverless

donchid.online@gmail.com | <https://victor-chidera-25.vercel.app/>

Port Harcourt, Nigeria | Open to Remote | +2348063807769

SUMMARY

Full-stack product engineer experienced in building and shipping production applications with React, Next.js, TypeScript, Node.js, Firebase, and Supabase. Strong focus on serverless architecture, scalable systems, clean code, performance, and end-to-end product ownership. Experienced working independently as a founder, taking products from concept through development, deployment, and iteration. Comfortable building real-time, AI-powered applications and working across frontend, backend, databases, authentication, APIs, and cloud infrastructure. Passionate about thoughtful architecture, maintainable codebases, and fast-paced, collaborative engineering workflows.

WORK EXPERIENCE

Kudiflow | Founder & Lead Engineer

Feb 2026 – Present

Built an Offline-first platform that helps vendors in emerging markets track sales, manage inventory, and collect debts via WhatsApp.

- Engineered a high-performance Progressive Web App (PWA) with React and Vite focused on offline-first reliability.
- Integrated serverless email and notification systems using Firebase Cloud Functions and Resend for automated workflows (OTP, alerts, onboarding).
- Applied performance and SEO techniques that improved load times and discoverability.

Novluma AI | Founder & Lead Engineer

Dec 2024 – Jan 2026

Built a serverless SaaS platform that helps brands publish, analyse, and grow using predictive AI.

- Architected the full-stack application using React and Firebase, covering authentication, real-time data, and payment flows.
- Developed a live analytics dashboard with real-time visualization of token usage and generation metrics.
- Implemented production-grade security with Firestore Security Rules and secure API key handling.

EDUCATION

Bachelor of Engineering

Sep 2017 – April 2024

University of Port Harcourt

- Major in Electronics Engineering

KEY SKILLS

- **Frontend:** React.js, TypeScript, JavaScript (ES6+), Vite, Tailwind CSS, HTML5, responsive UI development
- **Backend & Serverless:** Node.js, Firebase (Authentication, Cloud Firestore, Cloud Functions), REST API integration, Supabase, serverless architecture.
- **Tools & Practices:** Git, GitHub, npm/yarn, performance optimization, offline-first PWAs, AI model integration (Google Gemini)
- **Other:** Client-side logic, API security, NoSQL data modeling, building and shipping production features independently
